Microbes may be largely invisible, but we are more familiar with them than we often think. An experiment carried out by Jos Raaijmakers, NIOO's head of Microbial Ecology, during his inaugural lecture as professor in Leiden demonstrates that we really do live in a microbial world.

Living in a microbial world

The microbial world encompasses most of the phylogenetic diversity on Earth, as all Bacteria, all Archaea, and most lineages of the Eukarya are microorganisms. Microbes live in every kind of habitat (terrestrial, aquatic, atmospheric, or living host) and their presence invariably affects the environment in which they grow.
