The fluids in your body will shift upwards to your head, which could put pressure on your eyes causing vision problems. You're apt to develop kidney stones due to dehydration and increased excretion of calcium from your bones. Medications react differently in your body in space.

The Human Body in Space | NASA

Human physiology is the study of how the human body functions. This includes the mechanical, physical, bioelectrical, and biochemical functions of humans in good health, from organs to the cells of which they are composed. The human body consists of many interacting systems of organs.

Human body - Wikipedia

Modern medical science has discovered many principles of good health, but they originated with God who designed and created the miracle that is the human body. What the Bible says about health is that those who follow God will generally be healthy. That does not necessarily mean that those who don't follow God will always be sick.
